One developer, the whole build.

I build web apps, portals and platforms for agencies and small businesses, from the database to the launch. One person is responsible for every layer, at one fixed price agreed in writing.

What I build

Platforms and web apps
Data model, logins, roles, admin, payments and deployment

Client portals and member areas
Documents, status updates, messages, protected pages

Booking systems and dashboards
Availability, confirmations, filters, exports, permissions

Integrations
CRM, Stripe, newsletter, calendar, AI or any third-party API

Tech stack

Frontend
Next.js and React

Backend
Node.js

Database and auth
Supabase and PostgreSQL

Payments and AI
Stripe and AI integrations

How a project runs

01 · Brief
You write a few lines: what it should do, who uses it, when you need it. No call.

02 · Fixed price
Within 24 hours: scope, delivery date and one number, in writing.

03 · Build
50% on order. Every layer goes up on a live preview link you can open any time.

04 · Launch
50% on acceptance. Code and documentation handed over, 30 days of bug fixing.

Proof

Offscript · offscriptfootball.com
My own product for football clubs: website in four languages, club CMS, AI match reports, price calculator, client portal and online contracts. Designed, built and run alone.

Farbspur · farbspur.pages.dev
Open source skin for the Video.js v10 player. The seek bar is built from the video's cuts, with full keyboard control.

For agencies

White-label builds: you keep the client, I build frontend, backend and database from your design or with mine. Under NDA if you want.
